

## 20464: Developing Microsoft SQL Server 2014 Databases

- **Formato do curso:** Presencial e Live Training
- **Localidade:** Porto
- **Com certificação:** MCSE: Data Platform
- **Data:** 06 Mai. 2019 a 10 Mai. 2019
- **Preço:** 1720€
- **Horário:** Laboral - das 09h30 às 17h30
- **Nível:** Avançado
- **Duração:** 35 horas

Este curso de 5 dias, fornece aos participantes os conhecimentos necessários, para implementar e otimizar uma Base de Dados em SQL Server 2012 / 2014.

Descreve o desenho lógico e físico das estruturas de suporte de dados (tabelas e índices), bem como a criação de objectos (Vistas, Funções, Procedimentos), bem como outros aspetos do desenvolvimento de Bases de Dados como índices, concorrência de dados, tratamento de erros e triggers.

Este curso foi desenhado para que o formando aprenda as funcionalidades de SQL Server 2012, ou 2014, cobrindo não só as novas funcionalidades do SQL Server 2014, mas também fornecendo a base necessária das funcionalidades do produto neste contexto.

**The 70-464 certification exam retires on January 31, 2021**

---

### Destinatários

Profissionais de TI, com necessidade de implementação de Bases de Dados em SQL Server 2012/2014.

---

### Pré-requisitos

- Conhecimentos de Bases de Dados Relacionais
- Elaboração de Consultas em SQL Server
- Recomenda-se a frequência do seguinte curso:
  - “20461 – Querying Microsoft SQL Server” ou conhecimento equivalente

---

## Objectivos

No final da ação de formação os participantes deverão estar aptos a:

- Conhecer toda a Plataforma SQL Server e suas ferramentas
- Escolher os tipos de dados corretos na implementação de Tabelas, bem como conversões de dados
- Conhecer as melhores práticas recomendadas, na implementação de tabelas, via consola ou Transact-SQL (não cobre particionamento de tabelas)
- Implementação de constraints PRIMARY KEY, FOREIGN KEY, UNIQUE, CHECK e DEFAULT
- Determinar a correta utilização de Índices singulares e compostos
- Criar Tabelas utilizando Heaps ou Clustered Indexes
- Ler e interpretar planos de execução
- Construir Non-Clustered Indexes eficazes
- Desenho e Implementação de Vistas
- Desenho e Implementação de Stored Procedures
- Utilizar variáveis e parâmetros de tipo Tabela, bem como da instrução MERGE, na criação de Stored Procedures com vista a alimentar um Data Warehouse
- Desenho e Implementação de Funções, de tipo escalar ou tabular, bem como as consequências do seu uso em termos de performance
- Resolução de problemas de concorrência no acesso a dados, assim como níveis de isolamento de dados
- Tratamento de erros, tradicional e estruturado
- Desenho e implementação de Triggers de DML
- Implementação de objetos de .Net (Managed Code) em SQL Server
- Armazenamento e Manipulação de XML

---

## Metodologia

Pode assistir a este curso de forma:

- Presencial

---

## Programa

### **Module 1: Introduction to Database Development**

This module introduces database development and the key tasks that a database developer would typically perform.

#### **Lessons**

- Introduction to the SQL Server Platform
- SQL Server Database Development Tasks

## **Lab : Introduction to Database Development**

After completing this module, you will be able to:

- Describe the architecture and editions of SQL Server 2012.
- Work with SQL Server tools.
- Configure SQL Server Services.

## **Module 2: Designing and Implementing Tables**

This module explains how to design, create, and alter tables. Also it focusses on working with schemas.

### **Lessons**

- Designing Tables
- Data Types
- Working with Schemas
- Creating and Altering Tables
- Partitioning Data
- Compressing Data

## **Lab : Designing and Implementing Tables**

After completing this module, you will be able to:

- Design Tables.
- Work with Schemas.
- Create and Alter Tables.

## **Module 3: Ensuring Data Integrity through Constraints**

This module explains how to enforce data integrity, and implement domain integrity to maintain high quality data. Also it focusses on implementing Entity and Referential Integrity.

### **Lessons**

- Enforcing Data Integrity
- Implementing Domain Integrity
- Implementing Entity and Referential Integrity

## **Lab : Ensuring Data Integrity through Constraints**

After completing this module, you will be able to:

- Explain the available options for enforcing data integrity and the levels at which they should be applied.
- Implement domain integrity.
- Implement entity and referential integrity.

## **Module 4: Introduction to Indexing**

This module describes the concept of an index and discusses selectivity, density and statistics. It covers appropriate data type choices and choices around composite index structures.

### **Lessons**

- Core Indexing Concepts
- Data Types and Indexes
- Single Column and Composite Indexes

### **Lab : Implementing Indexes**

After completing this module, you will be able to:

- Describe core indexing concepts.
- Choose appropriate data types for indexes.
- Design and implement clustered and nonclustered indexes.

### **Module 5: Designing Optimized Index Strategies**

This module explains covering indexes and the INCLUDE clause as well as the use of padding, hints and statistics. The module also covers the use of the Database Engine Tuning Advisor and index-related dynamic management views to assess indexing strategies.

### **Lessons**

- Covering Indexes
- Managing Indexes
- Working with Execution Plans
- Using the DTE

### **Lab : Designing Optimized Index Strategies**

After completing this module, you will be able to:

- Describe the elements of an execution plan.
- Design effective indexing strategies.
- Monitor your system to assess the performance of your indexing strategy.

### **Module 6: Columnstore Indexes**

This module explains columnstore indexes and how to use them to maximize the performance and scalability of database applications.

### **Lessons**

- Introduction to Columnstore indexes
- Creating Columnstore Indexes
- Working with Columnstore Indexes

### **Lab : Using Columnstore Indexes**

After completing this module, you will be able to:

- Create columnstore indexes.
- Describe the considerations for updating tables with non-clustered columnstore indexes.

## **Module 7: Designing and Implementing Views**

This module introduces Views, and explains how to create and manage Views. Also it focuses on the performance consideration for Views.

### **Lessons**

- Introduction to Views
- Creating and Managing Views
- Performance Considerations for Views

### **Lab : Designing and Implementing Views**

After completing this module, you will be able to:

- Explain the role of views in database development.
- Implement views.
- Describe the performance related impacts of views.

## **Module 8: Designing and Implementing Stored Procedures**

This module describes the potential advantages of the use of stored procedures along with guidelines on creating them.

### **Lessons**

- Introduction to Stored Procedures
- Working With Stored Procedures
- Implementing Parameterized Stored Procedures
- Controlling Execution Context

### **Lab : Designing and Implementing Stored Procedures**

After completing this module, you will be able to:

- Describe the role of stored procedures and the potential benefits of using them.
- Work with stored procedures.
- Implement parameterized stored procedures.
- Control the execution context of a stored procedure.

## **Module 9: Designing and Implementing User-Defined Functions**

This module explains how to design and implement user-defined functions that enforce business rules or data consistency, and modify and maintain existing functions written by other developers.

## Lessons

- Overview of Functions
- Designing and Implementing Scalar Functions
- Designing and Implementing Table-Valued Functions
- Implementation Considerations for Functions
- Alternatives to Functions

### Lab : Designing and Implementing User-Defined Functions

After completing this module, you will be able to:

- Design and implement scalar functions.
- Design and implement table-valued functions.
- Describe implementation considerations for functions.
- Describe alternatives to functions.

### Module 10: Responding to Data Manipulation via Triggers

This module, explains what DML triggers are and how they enforce data integrity. Also it focusses on the different types of triggers available, and how to define triggers in a database.

## Lessons

- Designing DML Triggers
- Implementing DML Triggers
- Advanced Trigger Concepts

### Lab : Responding to Data Manipulation via Triggers

After completing this module, you will be able to:

- Design DML triggers.
- Implement DML triggers.
- Explain advanced DML trigger concepts.

### Module 11: Using In-Memory Tables

This module covers the creation of in-memory tables and native stored procedures and discusses the advantages and disadvantages of using in-memory tables.

## Lessons

- In-Memory Tables
- Native Stored Procedures

### Lab : In-Memory OLTP

After completing this module, you will be able to:

- Design and implement memory-optimized tables.
- Create native stored procedures.

## **Module 12: Implementing Managed Code in SQL Server 2014**

This module explains how to use CLR integrated code to create user-defined database objects that are managed by the .NET Framework.

### **Lessons**

- Introduction to SQL CLR Integration
- Importing and Configuring Assemblies
- Implementing SQL CLR Integration

### **Lab : Implementing Managed Code in SQL Server 2014**

After completing this module, you will be able to:

- Explain the importance of SQL Server CLR Integration.
- Import and configure assemblies.
- Implement objects that have been created within .NET assemblies.

## **Module 13: Storing and Querying XML Data in SQL Server**

This module introduces XML and shows how XML data can be stored within SQL Server and then queried, including queries written in a language called XQuery.

### **Lessons**

- Introduction to XML and XML Schemas
- Storing XML Data and Schemas in SQL Server
- Implementing the XML Data Type
- Using the T-SQL FOR XML Statement
- Getting Started with XQuery

### **Lab : Storing and Querying XML Data in SQL Server 2014**

After completing this module, you will be able to:

- Describe XML and XML schemas.
- Store XML data and associated XML schemas in SQL Server.
- Implement the XML data type within SQL Server.
- Use the T-SQL FOR XML Statement.
- Work with basic XQuery queries.
- Shred XML to a relational form.

## **Module 14: Working with SQL Server 2014 Spatial Data**

This module introduces Spatial Data, and explains how to work with SQL Server Spatial Data Types.

## Lessons

- Introduction to Spatial Data
- Working with SQL Server Spatial Data Types
- Using Spatial Data in Applications

### Lab : Working with SQL Server Spatial Data

After completing this module, you will be able to:

- Describe the importance of spatial data and the industry standards related to it.
- Explain how to store spatial data in SQL Server.
- Perform calculations on and query SQL Server spatial data.

## Module 15: Incorporating Data Files into Databases

### Lessons

- Querying Data with Stored Procedures
- Implementing FILESTREAM and File Tables
- Searching Data Files

### Lab : Implementing a Solution for Storing Data Files
