

Automation with Red Hat Ansible II: Ansible Tower (DO409)

- **Formato do curso:** Presencial e Live Training
- **Localidade:** Porto
- **Data:** 15 Mar. 2019 a 15 Mar. 2019
- **Preço:** 1080€
- **Horário:** Laboral - das 09h00 às 17h00
- **Duração:** 13,5 horas

Take your automation to the next level with Red Hat Ansible Tower

Automation with Ansible II: Ansible Tower (DO409) is designed for Ansible site administrators who need to automate tasks on large numbers of managed nodes with extended teams or are responsible for centrally coordinating and logging Ansible operations. You will learn how to install Red Hat® Ansible Tower, use the web interface to manage access to resources and hosts, and create templates to start Ansible jobs.

This course is based on Red Hat Ansible Tower 3.3 and Red Hat® Ansible Engine 2.7.

In this course, you will configure and organize users into teams and assign permissions that allow them to review, use, or manage resources on Ansible Tower. You will also learn about advanced workflow management and receive a basic introduction to the Ansible Tower API.

The material covered in this curriculum is now included within our newly released [Advanced Automation: Ansible Best Practices \(DO447\)](#) course, which teaches you how to use Red Hat Ansible Automation to automate across different functions.

Learn to

- Install Red Hat Ansible Tower.
- Configure users and teams to access Ansible Tower resources using role-based access controls.
- Use Ansible Tower to manage shared access to inventories and machine credentials.
- Create job templates and workflow job templates to standardize playbook execution.
- Launch playbooks and monitor and review job results using Ansible Tower.

Diagnóstico de Competências

Teste previamente os seus conhecimentos, ou os da sua equipa, em:

- Red Hat Satellite
- Ansible
- RH JBoss Enterprise Application Platform
- RH Gluster Storage
- RH OpenShift
- RH OpenStack Platform
- RH Enterprise Linux 7
- RH Fuse
- RH Camel
- RH AMQ
- RH Ceph Storage
- RH Identity Management
- RH Enterprise Linux 8

Destinatários

- This course is designed for system administrators, DevOps engineers, release engineers, and other IT professionals.
 - The curriculum is particularly geared toward those responsible for designing and implementing DevOps capabilities in complex multiple-application production environments; maintaining and enforcing continuous integration and continuous delivery (CI/CD) pipelines and tools; and centrally managing and controlling Red Hat® Ansible Automation at scale.
-

Pré-requisitos

Red Hat recommends these prerequisites:

- Successfully completed [Automation with Ansible I \(DO407\)](#) or equivalent experience with Ansible, Ansible playbooks, and roles
 - Be a Red Hat Certified Specialist in Ansible Automation, or demonstrate equivalent Ansible experience
 - Have Red Hat Certified System Administrator (RHCSA) certification in Red Hat Enterprise Linux or equivalent Linux system administration skills
 - Being a Red Hat Certified Engineer (RHCE) may be beneficial
-

Objetivos

for the organization

This course is intended to develop the skills needed to leverage and extend the use of an existing Ansible infrastructure across business units in large enterprise environments. These skills are suitable for organizations

seeking to increase cost savings and operational efficiency through wider adoption of Ansible in their enterprise.

for on the individual

As a result of attending this course, you should be able to use Red Hat Ansible Tower to centrally manage Ansible projects in a way that scales to large teams and complex enterprise installations. You should be able to demonstrate these skills:

- Deploy and use Ansible Tower to manage existing Ansible projects, playbooks, and roles.
 - Use the visual dashboard to centrally launch, control, and monitor Ansible jobs.
 - Configure users and teams and use them to control access to systems, projects, and other resources through role-based access controls.
 - Configure which hosts to manage through the web interface, dynamically, or from a file stored in Git version control.
 - Schedule recurring Ansible jobs.
 - Perform basic maintenance and administration of the Ansible Tower installation.
 - Use the Ansible Tower API to launch jobs from existing templates.
-

Programa

Install and access Ansible Tower

- Explain what Red Hat Ansible Tower is and navigate and use its web user interface.

Manage access with users and teams

- Create user accounts and organize them into teams in Red Hat Ansible Tower, and assign the users and teams permissions to administer and access resources in the Ansible Tower service.

Manage inventories and credentials

- Create inventories of machines to manage, and configure credentials necessary for Red Hat Ansible Tower to log in and run Ansible jobs on those systems.

Manage projects and launch Ansible jobs

- Create projects and job templates in the web UI, using them to launch Ansible playbooks that are stored in Git repositories in order to automate tasks on managed hosts.

Construct advanced job workflows

- Use advanced features of job templates to improve performance, simplify customization of jobs, launch multiple jobs, schedule automatically recurring jobs, and provide notification of job results.

Manage advanced inventories

- Manage inventories that are loaded from external files or generated dynamically from scripts or the Ansible Tower smart inventory feature.

Perform maintenance and routine administration of Ansible Tower

- Demonstrate ability to deliver routine maintenance and administration of Ansible Tower.

Comprehensive review

- Demonstrate skills learned in this course by configuring and operating a new organization in Ansible Tower using a provided specification, Ansible projects, and hosts to be provisioned and managed.
