

# Implementing Cisco Service Provider Advanced Routing Solutions (SPRI)

- **Formato do curso:** Presencial e Live Training
- **Preço:** sob consulta€
- **Duração:** 35 horas

The **Implementing Cisco Service Provider Advanced Routing Solutions (SPRI)** course teaches you theories and practices to integrate advanced routing technologies including routing protocols, multicast routing, policy language, Multiprotocol Label Switching (MPLS), and segment routing, expanding your knowledge and skills in service provider core networks.

This course prepares you for the **300-510 Implementing Cisco® Service Provider Advanced Routing Solutions (SPRI)** exam.

This course will help you:

- Gain the high-demand skills to maintain and operate advanced technologies related to Service Provider core networks
- Increase your knowledge and skills for implementing Service Provider core advanced technologies through hands-on application and practical instruction
- Prepare to take the **300-510 SPRI** exam

## Destinatários

Engineers who maintain and operate advanced Service Provider core networks.

## Pré-requisitos

**Attendees should meet the following prerequisites:**

- Intermediate to advanced knowledge of Cisco Internetwork Operating System (Cisco IOS®) or IOS XE and Cisco IOS XR Software configuration
- Knowledge of IPv4 and IPv6 TCP/IP networking
- Intermediate knowledge of BGP, OSPF, and ISIS routing protocols
- Understanding of MPLS technologies
- Understanding of multicast technologies

- Familiarity with segment routing
- 

## Objetivos

After taking this course, you should be able to:

- Describe the main characteristics of routing protocols that are used in Service provider environments
  - Implement advanced features of multiarea Open Shortest Path First (OSPFv2) running in Service Provider networks
  - Implement advanced features of multilevel Intermediate System to Intermediate System (ISIS) running in Service Provider networks
  - Configure route redistribution
  - Configure Border Gateway Protocol (BGP) in order to successfully connect the Service Provider network to the customer or upstream Service Provider
  - Configure BGP scalability in Service Provider networks
  - Implement BGP security options
  - Implement advanced features in order to improve convergence in BGP networks
  - Troubleshoot OSPF, ISIS, and BGP
  - Implement and verify MPLS
  - Implement and troubleshoot MPLS traffic engineering
  - Implement and verify segment routing technology within an interior gateway protocol
  - Describe how traffic engineering is used in segment routing networks
  - Implement IPv6 tunneling mechanisms
  - Describe and compare core multicast concepts
  - Implement and verifying the PIM-SM protocol
  - Implement enhanced Protocol-Independent Multicast - Sparse Mode (PIM-SM) features
  - Implement Multicast Source Discovery Protocol (MSDP) in the interdomain environment
  - Implement mechanisms for dynamic Rendezvous Point (RP) distribution
- 

## Metodologia

- Instructor-led classroom: 5 days in the classroom with hands-on lab practice
- 

## Programa

### Labs

- Implement OSPF Special Area Types (IPv4 and IPv6)
- Implement Multiarea IS-IS
- Implement Route Redistribution
- Influence BGP Route Selection
- Implement BGP Route Reflectors

- Implement BGP Security Options
- Troubleshoot Routing Protocols
- Implement MPLS in the Service Provider Core
- Implement Cisco MPLS TE
- Configure and Verify Interior Gateway Protocol (IGP) Segment Routing
- Implement Tunnels for IPv6
- Enable and Optimize PIM-SM
- Implement PIM-SM Enhancements
- Implement Rendezvous Point Distribution
