

DP-300: Administering Relational Databases on Microsoft Azure

- **Formato do curso:** Presencial e Live Training
- **Localidade:** Live Training
- **Data:** 01 Set. 2020 a 22 Set. 2020
- **Preço:** 1470€
- **Promoção:** -25%
- **Horário:** Pós-laboral e Sábados - 3ª e 5ª, das 18h45 às 22h15; Sábados das 9h30 às 13h00
- **Nível:** Intermédio
- **Duração:** 28 horas

This course provides students with the knowledge and skills to administer a SQL Server database infrastructure for cloud, on-premises and hybrid relational databases and who work with the Microsoft PaaS relational database offerings. Additionally, it will be of use to individuals who develop applications that deliver content from SQL-based relational databases.

After completing this course, students will be able to:

- Plan, deploy and configure Azure SQL offerings
- Monitor database performance and tune a database and queries for optimum performance
- Plan and configure a High Availability Solution

Destinatários

- Data professionals managing data and databases who want to learn about administering the data platform technologies that are available on Microsoft Azure.
- Data architects and application developers who need to understand what technologies are available for the data platform with Azure and how to work with those technologies through applications.

Pré-requisitos

In addition to their professional experience, students who take this training should have technical knowledge equivalent to the following courses:

- [Azure Fundamentals](#)
- Azure Data Fundamentals

Programa

The Role of the Azure Database Administrator

- Azure Data Platform Roles
- Azure Database Platforms and Options
- SQL Server Compatibility Levels
- Azure Preview Features
- **Lab : Using the Azure Portal and SQL Server Management Studio**

Plan and Implement Data Platform Resources

- Deploying SQL Server using IaaS
- Deploying SQL Server using PaaS
- Deploying Open Source Database Solutions on Azure
- **Lab : Deploying Azure SQL Database**

Implement a Secure Environment

- Configure Database Authentication
- Configure Database Authorization
- Implement Security for Data at Rest
- Implement Security for Data in Transit
- Implement Compliance Controls for Sensitive Data
- **Lab : Implement a Secure Environment**

Monitor and Optimize Operational Resources

- Baselines and Performance Monitoring
- Major Causes of Performance Issues
- Configuring Resources for Optimal Performance
- User Database Configuration
- Performance-related Maintenance Tasks
- **Lab : Monitor and Optimize Resources**

Optimize Query Performance

- Understanding SQL Server Query Plans
- Explore Performance-based Database Design
- Evaluate Performance Improvements
- **Lab : Query Performance Troubleshooting**

Automation of Tasks

- Setting up Automatic Deployment
- Defining Scheduled Tasks
- Configuring Extended Events
- Managing Azure PaaS resources Using Automated Methods

- **Lab : Automating Tasks**

Plan and Implement a High Availability and Disaster Recovery Environment

- High Availability and Disaster Recovery Strategies
- IaaS Platform and Database Tools for HADR
- PaaS Platform and Database Tools for HADR
- Database Backup and Recovery

- **Lab : Plan and Implement a High Availability and Disaster Recovery Environment**
