

Red Hat OpenStack Administration II: Day 2 Operations for Cloud Operators (CL210VC)

- **Formato do curso:** E-learning
- **Preço:** 2159€

Build advanced skills for performing Red Hat OpenStack Platform day 2 operations and management of hybrid cloud infrastructure.

Red Hat OpenStack Administration II: Day 2 Operations for Cloud Operators (CL210) is designed for cloud operators, service administrators, and automation engineers who operate and manage a full-featured hybrid and private cloud-computing environment using Red Hat OpenStack Platform. You will learn how to manage, monitor, troubleshoot, and scale a Red Hat OpenStack Platform infrastructure.

This course focuses on using the OpenStack Client command-line user interface to configure metrics, policies, and architecture in order to support enterprise cloud applications and daily operations.

This course is based on Red Hat OpenStack version 16.1 and Red Hat Enterprise Linux version 8.2

Este curso e-learning inclui

- Conteúdos disponíveis 24/7
- E-book e Hands-on Lab
- O curso oficial Red Hat em e-learning tem a duração de 90 dias. No entanto, por forma a alcançar melhores resultados na aprendizagem, a Rumos aconselha a realização do curso em **60 dias**. Para tal, o formando irá contar com:
 - 4h de apoio Rumos em formato síncrono (online em tempo real)
 - 1 sessão de Kick Off de 1h para orientação e esclarecimento de dúvidas
 - 1 sessão de Q&A de 3h que ocorre 60 dias após a sessão de Kick Off

Este curso também está disponível no formato Presencial / Live Training. Para mais informações aceda ao link: [Red Hat OpenStack Administration II: Day 2 Operations for Cloud Operators \(CL210VC\)](#)

Skills Assessment

Use o diagnóstico de competências para descobrir quais as oportunidades de formação que mais se adequam a si, ou à sua equipa.

[Aceda aqui ao diagnóstico](#)

Destinatários

- Cloud operators responsible for managing daily operations and automation.
 - Infrastructure architects interested in or responsible for maintaining a large-scale private or hybrid cloud.
-

Pré-requisitos

- Be a Red Hat Certified Engineer (RHCE), Red Hat Certified Specialist in Ansible Automation, or demonstrate equivalent experience.
 - For candidates that have not earned an RHCE or equivalent, confirmation of the correct skill-set knowledge can be obtained by [taking our free assessment](#) to gauge whether this offering is the best fit for your skills.
 - Attend [Red Hat OpenStack Administration I: Core Operations for Domain Operators \(CL110\)](#), or demonstrate equivalent experience.
-

Objetivos

- Managing overcloud service containerization technology.
 - Providing metrics for performance tuning and governance.
 - Monitoring and troubleshooting Open Virtual Networking (OVN) network flow.
 - Configuring Identity service using an external Red Hat IdM store.
 - Managing the core control plane, including Pacemaker.
 - Customizing images, with techniques for multiple use cases.
 - Managing block and object storage back-ends.
 - Managing compute nodes, including tuning and hyperconverged.
 - Troubleshooting Red Hat OpenStack Platform.
-

Programa

Navigate the Red Hat OpenStack Platform architecture

- Describe the undercloud and overcloud architecture and service components.

Operate the control plane

- Describe and manage the critical core services of the Red Hat OpenStack Platform control plane.

Manage infrastructure security

- Protect the Red Hat OpenStack Platform infrastructure by securing service component files and endpoints.

Manage user security

- Configure secure user privileges using domain-based identity management, scoped roles, and project organization.

Manage application deployment resources

- Create and manage the common, shared deployment resources including custom images, flavors, and metadata services.

Manage storage

- Describe and manage storage architecture and components, with an emphasis on Red Hat Ceph Storage back ends.

Manage networking

- Create, manage, and troubleshoot data center and virtual network infrastructure.

Manage compute node operations

- Describe the architecture and management processes for normal and hyperconverged compute nodes. Perform common operational tasks for compute nodes to support workload uptime and scaling.

Monitor Red Hat OpenStack Platform operations

- Describe the monitoring framework and architecture to gather, store, and use operational metrics.

Automate cloud applications

- Implement and deploy complex and scalable applications using automation technologies.

Troubleshoot operations

- Describe and practice the tools and methods for diagnosing and troubleshooting issues encountered during deployment and management operations.

Comprehensive review

- Review tasks from Red Hat OpenStack Platform Administration II: Day 2 Operations for Cloud Operators.
