

Java EE 7: Front-end Web Application Development

- **Formato do curso:** Presencial e Live Training
- **Localidade:** Lisboa
- **Data:** 26 Jul. 2021 a 30 Jul. 2021
- **Preço:** 2550€
- **Horário:** Laboral - das 09h30 às 16h30
- **Duração:** 30 horas

This **Java EE 7: Front-end Web Application Development** training helps you explore building and deploying enterprise applications that comply with the Java Platform, Enterprise Edition 7 Web Profile.

Expert instructors will help you explore annotations, Session Enterprise JavaBeans (EJB-Lite), Java Persistence API (JPA), servlets, JavaServer Pages (JSPs), Contexts and Dependency Injection (CDI), JAX-RS RESTful web services, the Java API for WebSocket and the Java API for JSON processing.

Learn To:

- Develop web-based interfaces for both desktop and mobile devices.
- Assemble an application.
- Build Java applications.
- Deploy an application into an application server (Java EE platform runtime environment).

Benefits to You

By taking this course, you'll gain hands-on experience building Java EE web applications. You will get the chance to create web-based user interfaces using HTML5 and JavaScript along with JSPs and servlets. Web-based user interfaces will use AJAX to communicate with RESTful web services you create; data will persist using JPA and optimistic locking.

Participate in Hands-On Labs

By learning through hands-on exercises via structured labs, you'll get a chance to explore EJB-Lite session bean components, which can be used with container-managed transactions. You'll perform lab exercises using the NetBeans IDE and WebLogic Server.

Destinatários

- Administrator

- Developer
-

Pré-requisitos

Suggested Prerequisite

- JavaScript and HTML5: Develop Web Applications
- Experience with an Integrated Development Environment

Required Prerequisite

- [Java SE Programming](#)
 - Experience with Java SE, or Java Programmer Certification
 - Understand object-oriented principles
 - Basic understanding of database concepts and SQL syntax
 - Able to author HTML, CSS, and JavaScript enabled web pages
-

Objetivos

- Create and use Java annotations
 - Select the correct Java EE Profile for a given application
 - Develop and run an EJB technology application
 - Create Java EE technology applications with the Java EE 7 Platform
 - Identify the services provided by an Application Server
 - Package, deploy and debug enterprise applications
 - Create web-based user interfaces using Servlet, JSP, JAX-RS, and JavaScript technologies
 - Access relational databases using the Java Persistence API
 - Create scalable, transacted business logic with EJB-Lite
 - Develop basic Java Persistence API entity classes to enable database access
 - Develop a web-based user interface using Servlets, JSPs, and JAX-RS
 - Design applications to use dependency injection
 - Use IDEs and Application Servers for Java EE development
-

Programa

- Java Platform, Enterprise Edition
- Enterprise Development Tools and Applications
- JavaBeans, Annotations, and Logging
- Java EE Web Architecture
- Developing Servlets
- Developing with JavaServer Pages
- JAX-RS Web Services

- Java RESTful Clients
- HTML5 Applications with JavaScript and AJAX
- WebSocket and the Java API for JSON Processing
- Implementing a Security Policy
- POJO and EJB-Lite Component Models
- The Java Persistence API
- Implementing a transaction policy
