Implementing enterprise storage solutions This module describes the direct-attached storage (DAS), network-attached storage (NAS), and storage area networks (SANs). It also helps you understand Microsoft Internet Storage Name Service (iSNS) Server, data center bridging, and Multipath I/O (MPIO). Additionally, this module also compares Fibre Channel, Internet Small Computer System Interface (iSCSI), and Fibre Channel Over Ethernet (FCoE), and describes how to configure sharing in Windows Server 2016. After completing this module, students will be able to:

- Describe DAS, NAS, and SANs, and the usage scenarios for each topology.
- Compare Fibre Channel, FCoE, an iSCSI target and initiator. Describe iSNS, MPIO, data center bridging, and Windows Storage Server 2016 (two versions—Workgroup and Standard).

- Configure server message block (SMB) and network file system (NFS) shares by using Server Manager and Windows PowerShell.

Implementing Storage Spaces and Data Deduplication This module explains how to implement and manage Storage Spaces. This module also explains how to implement Data Deduplication. After completing this module, students will be able to:
